The Problem Statement

GLOBATHON

The Problem :

- **Advisors manage hundreds of investors** with different goals, risk profiles, and portfolios.
- Client data, past advice, and portfolio performance are **scattered across tools.**
- Advisors **struggle to identify** which investors are falling behind their financial goals.

Why Conventional Methods Fails Here :

- CRM (Customer Relationship Management) **tools store client information**, while **portfolio trackers monitor investments separately**.
- They **don't always connect past advice**, actual performance, and market benchmarks
- They **lack a clear explanation of why a client is underperforming** and who needs attention first.

Our Solution — AdviCue AI

Connects client goals, advice, and portfolio performance to uncover risks and prioritize investor attention.

120Hz

Proposed Solution

AdviCue AI

An AI-Powered Financial Advisor Intelligence Platform

Our Solution

- **Unified Client View**: Combines client goals, risk profiles, portfolio performance, and previous **advice in one place.**
- **AI-Powered Insights: Compares actual returns with expectations** and market benchmarks to explain performance gaps.
- **Smart Client Prioritization** : **Highlights investors who need attention** based on emerging risks, changing goals, and portfolio deviations.

Why It Works

- **Early Risk Detection**: Identifies portfolio deviations and **potential risks before the next scheduled client review**
- **Actionable Explanations:** Shows what is driving performance gaps instead of displaying numbers alone.
- **Scalable Advisory:** Helps advisors monitor hundreds of investors without manually reviewing every portfolio.

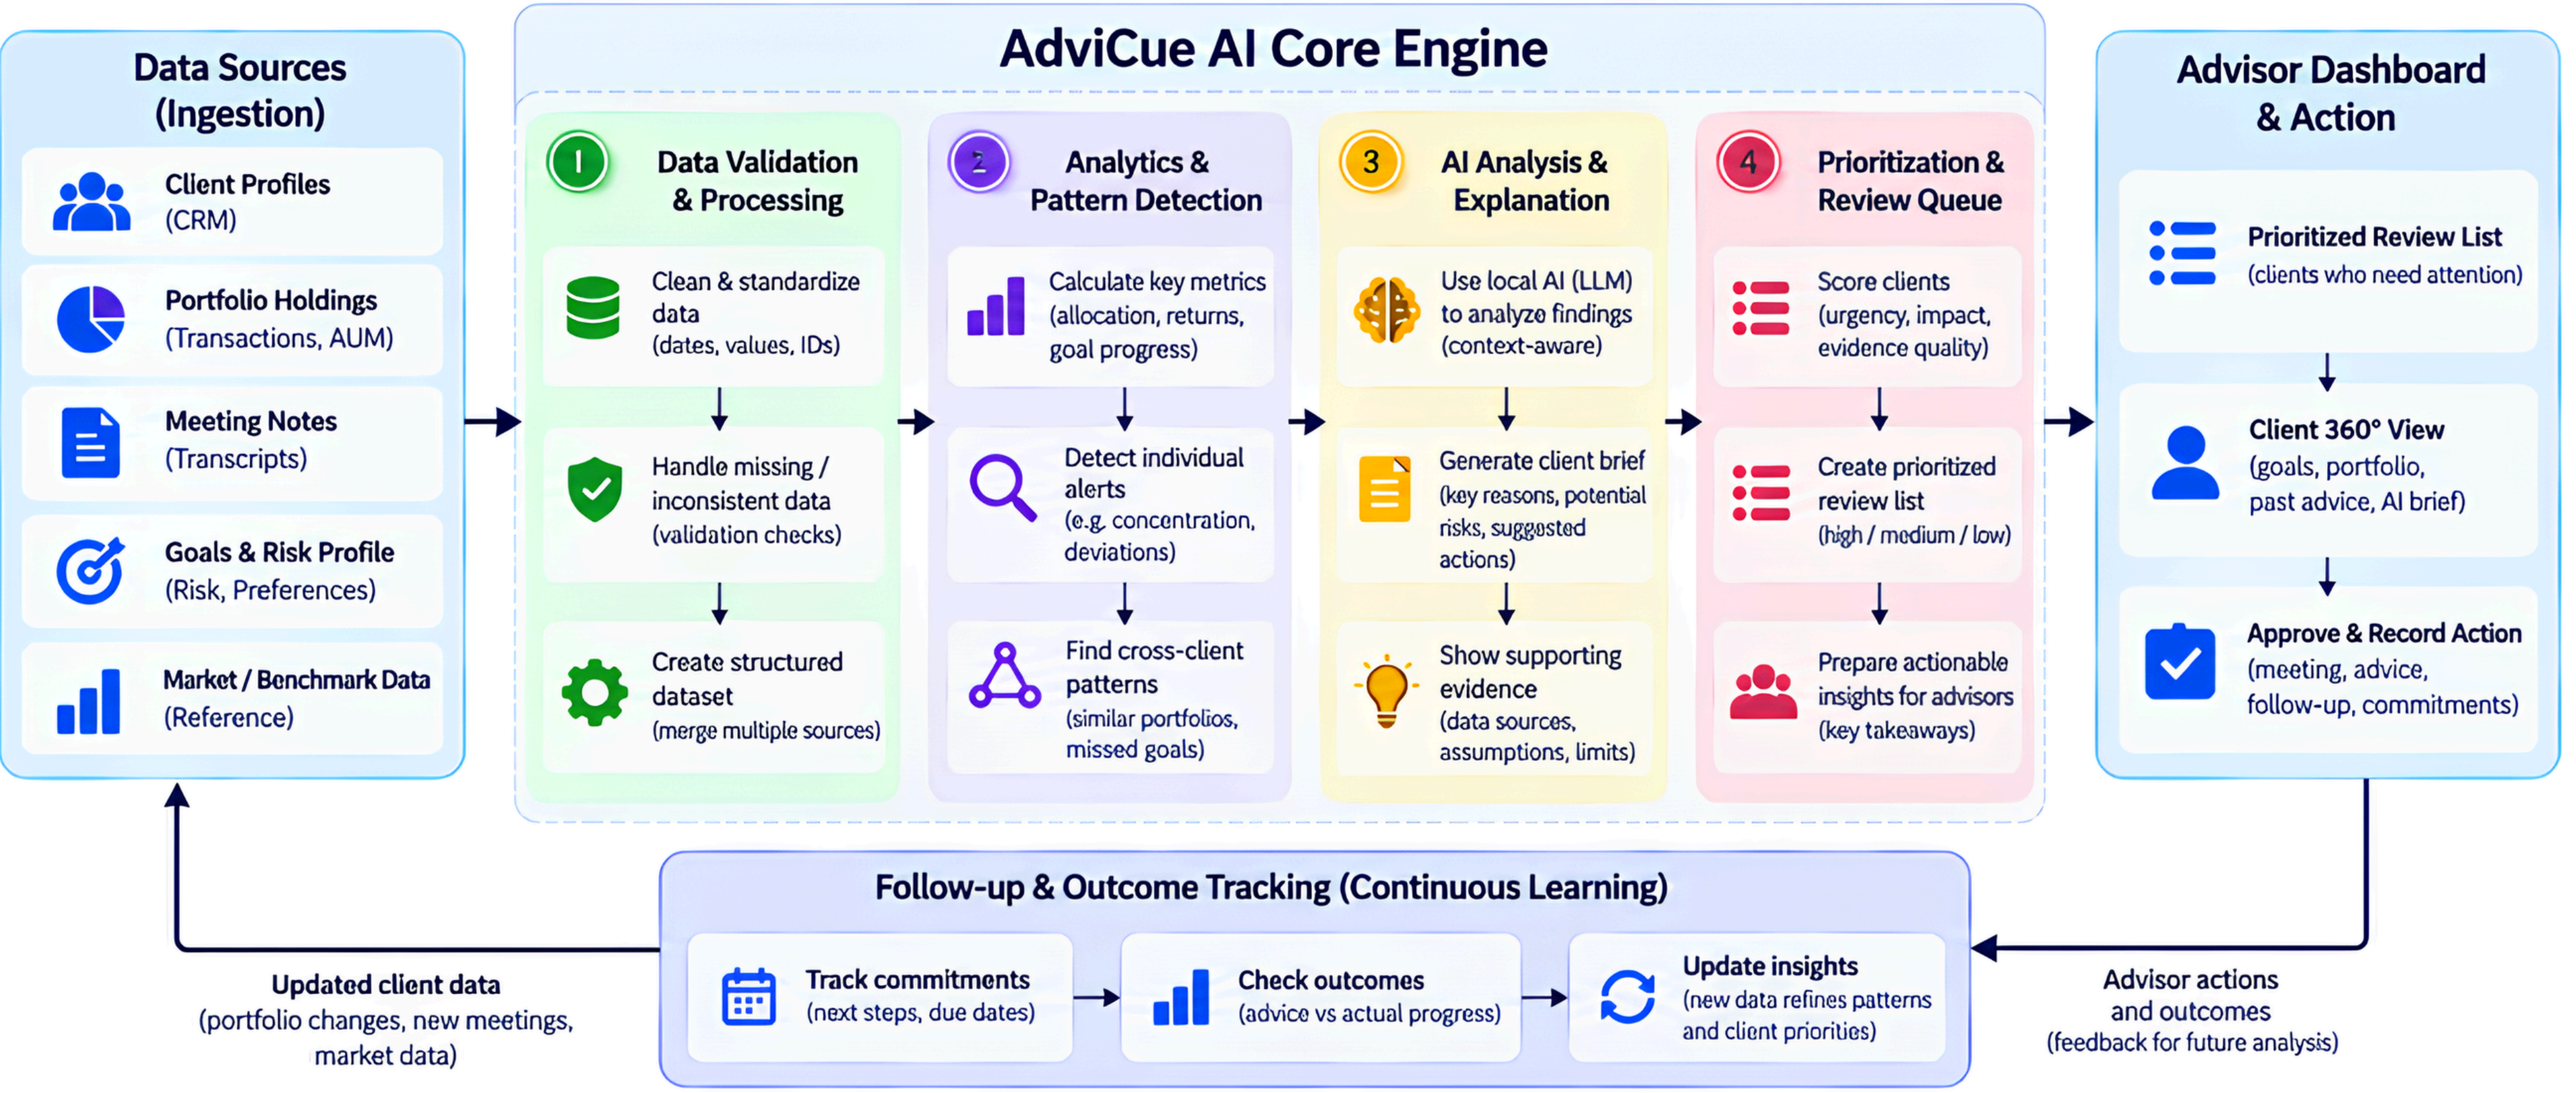

Why It's Unique

- **Advice-to-Outcome Tracking:** Connects previous financial advice with actual portfolio results.
- **Beyond Portfolio Tracking:** Combines client goals, market benchmarks, advisor notes, and investment behaviour.
- **Privacy-Focused AI**: Supports locally processed meeting transcripts and secure handling of sensitive client information.

TECHNICAL APPROACH

GLOBATHON

120Hz

FEASIBILITY AND VIABILITY

Feasibility	Challenges	Mitigation
Technical: Existing AI and SQL tools	Inconsistent financial data	**Data validation and cleaning**
Operational: Fits advisor workflow	Advisor trust in AI insights	**Explainable, evidence-based insights**
Financial: Open-source technologies	Cloud and AI costs	Local AI processing where practical
Security: Role-based access	Sensitive client information	Encryption and access controls

FEASIBILITY ASSESSMENT

- Technical: Uses existing AI, analytics, and database technologies.
- Data: Integrates portfolio, client, market, and advisor-note data
- Operational: Prioritizes clients who need attention, reducing manual reviews.

Economic & Operational Viability

- Cost-effective: Open-source tools reduce licensing costs.
- Time-saving: Automates portfolio comparisons and client prioritization.
- Advisor-focused: Complements existing CRM and portfolio tools rather than replacing them.
- Measurable value: Tracks review time, flagged risks, and follow-up completion.

Deployment & Sustainability

- Deployment: Web-based advisor dashboard with a secure backend.
- Database: SQLite for structured client and portfolio data.
- Privacy: Local AI processing for sensitive meeting transcripts where feasible.
- Maintenance: Regular data validation, model evaluation, and security reviews.

IMPACT AND BENEFITS

Our Impact

- **Transforming Financial Advisory with AI**
- **Faster client reviews**

Better-informed decisions

- **Early risk identification**
- **Better-informed decisions**
- **Personalized investor attention**

Benefits

Time Efficiency

Reduces manual portfolio reviews and saves advisor time.

Proactive Risk Detection

Flags performance gaps and potential risks early.

Scalable Client Care

Helps advisors prioritize hundreds of investors.

Advice-to-Outcome Tracking

Connects previous advice with actual portfolio progress.

BUSINESS MODEL & MARKET OPPORTUNITY

GLOBATHON

Business Model

- **SaaS Subscription**: Monthly or annual plans for financial advisors and advisory firms.
- **Tiered Pricing**: Plans based on the number of clients and AI features.
- **Enterprise Licensing**: Custom plans for wealth management firms and financial institutions.
- Premium Analytics: Advanced portfolio insights, risk alerts, and performance reporting.

Market Opportunity

- **Growing Need**: Advisors manage more clients and increasingly complex portfolios.
- **Market Gap**: Existing CRM and portfolio tools often separate client data from advice-to-outcome analysis.
- **Key Differentiator**: AI-driven explanations of performance gaps and prioritized client reviews.
- **Scalable Opportunity**: Start with independent advisors in India, then expand to larger advisory firms.
